### What's New in the ScarletFace For Trials: Developer 039;s Side Of Story?

ScarletFace For Trials is a user-friendly application for testing software trials. If you wish, you can configure an auto-start trial period in your trial product, when the trial period expires and if the program has been uninstalled during the trial period. At the end of the trial period, ScarletFace can also send information about the reason to not let it run: the trial period has expired, the installation isn't legit (the SFFT file or the system clock was manipulated, the program was reinstalled in another folder) or if there was some technical mishap and the configuration file is missing. ScarletFace can also be used to change the configuration file, so your users will always receive the same information. For this, you can simply register to an FTP server and receive the file(s) there or get them from some web-server. The SFFT encoding is based on three different sets of installation data double checking. ScarletFace has a Friendly User Interface. You can configure all the information there. The Help files include all the Windows API information you may need if you are a beginner and some code samples. You can also read the configuration files. Version Notes: 1.0 - Initial release. 1.1 - Fixed a few small bugs. 1.2 - Added the ability to change the default program from the Startup tab in the installation dialog. 1.3 - Fixed the filename for the configuration file, so SFFT stops working if the configuration file is lost. Install Notes: 1. Install the Uninstaller to remove the program after you've registered to an FTP server. If you have the setup file in the same folder as the program itself, you don't need to register to an FTP server. 1. Before you can use the configuration file reader, make sure to have the actual SFFT package. 2. If you wish to remove the registration as an Uninstaller from the program, you must do it manually. After the trial period expires, all information about the reason for not running the program will be deleted. Shortcut Notes: 1. Launch the uninstaller to remove SFFT. If you still wish to remove the registration, you must do it manually. 2. To run SFFT, launch the Installer and point to the SFFT installation package. 3. The shortcut for the uninstaller is SFFT.EXE. Other: 1. Include the NTFS support
