Formatting AutoCAD 2009 introduced a number of formatting capabilities. In particular, AutoCAD now includes a double-width line, a 3D Object Group leader and multiple document box sizes and some text styles. In addition, it can use the HTML markup language. To save file space and time, it is now possible to preview a drawing on-screen before saving it to a drawing template. AutoCAD also supports the ISO 639-2 language code standard, which enables users to create shortcuts for functions and menu items, with a one- or two-character code that can be inserted in a document by pressing the key. Users are not required to manually enter these codes; they can be automatically created and inserted by the application. As of the 2015 version, there are 8,500 available codes. In 2009, AutoCAD introduced the "simplification" of Drawing and Print functions. In an effort to streamline the user interface, the two functions have been merged, and the Print Manager window has been replaced with the Drawing Manager. A Print Manager can be opened from within the Drawing Manager, and the Print Manager can be accessed from the Ribbon. This change reduced the number of functions and windows a user needed to open to perform print-related tasks. Borland bought AutoCAD from Autodesk in 2010. A number of users sued Autodesk for alleged violations of their intellectual property rights and copyright infringement. Autodesk, based in Emeryville, California, filed a counterclaim for breach of contract. A court in California certified a class action, and the parties agreed to a settlement in late 2013. The company would pay US$24 million in compensation and file changes to its software with the court. The new version would be subject to an additional US$1 million in compensation if users upgraded to the 2013 version. Graphical User Interface AutoCAD was one of the first CAD applications to change from the 2D mouse interface to a 3D mouse interface. The first AutoCAD release for the Win32 platform, AutoCAD LT 1.0, included support for a 3D mouse. AutoCAD 2008 introduced a new 3D user interface. The 3D interface uses a three-by-three, or cube, metaphor. The mouse controls a "CubePoint", which can be manipulated with the mouse. This CubePoint is similar to a 3D camera in that it can be moved about the drawing, viewable a1d647c40b
