The game starts with a flight simulator that allows the player to fly through the game's 1. Field of the Invention The present invention relates to a solid-state image pickup apparatus and, more particularly, to a solid-state image pickup apparatus in which a CCD (charge-coupled device) image sensor is formed on an SOI (silicon on insulator) substrate. 2. Description of the Related Art As a solid-state image pickup apparatus having a CCD image sensor, a CMOS (complementary metal-oxide semiconductor) solid-state image pickup apparatus has been known. In the CMOS solid-state image pickup apparatus, circuit elements formed on a single substrate by MOS (insulation field effect) transistor technology are applied to a solid-state image pickup apparatus. For example, MOS solid-state image pickup apparatuses have been known in which an amplification type CCD image sensor and peripheral circuits (readout circuits, A/D circuits, etc.) are integrated on a single chip (see, for example, U.S. Pat. No. 5,237,581 and U.S. Pat. No. 5,455,788). It is also known that, in the CMOS solid-state image pickup apparatus, a back-side illumination solid-state image pickup apparatus having a through-electrode on a back surface of a CCD image sensor to allow light to reach the CCD image sensor from the back surface has been attracting attention as a method for realizing a color solid-state image pickup apparatus in which a small number of pixels are arranged in a wide photographing area (see, for example, U.S. Pat. No. 6,081,325). In the back-side illumination CMOS solid-state image pickup apparatus, an amplification type CCD image sensor is integrated 6d1f23a050
